

SAUCEDEMO

Test Summary Report

Manual Quality Assurance Testing Portfolio

Document ID	QA-TSR-001
Version	1.0 - Final
Prepared By	Nancy McKenzie
Application Under Test	SauceDemo
Test Environment	Google Chrome
Execution Scope	42 planned manual test cases

FINAL EXECUTION STATUS: COMPLETE

1. Executive Summary

Manual QA testing of SauceDemo was completed against the approved portfolio scope. All 42 planned test cases were executed. Forty-one test cases passed and one test case failed, resulting in a 97.6% pass rate and 100% execution completion. The failed test case, TC-041, identified three confirmed product information and image consistency defects.

Requirements traceability was completed across 24 documented requirements. All 24 requirements were validated through executed test coverage. Twenty-three requirements passed validation and one requirement, NFR-004 - Product Data Presentation Consistency, failed because of the three confirmed defects linked to TC-041.

2. Test Execution Metrics

Metric	Final Result
Planned Test Cases	42
Executed Test Cases	42
Passed	41
Failed	1
Blocked	0
Not Run	0
Execution Completion	100%
Pass Rate	97.6%
Confirmed Defects	3

3. Requirements Coverage

The final Requirements Traceability Matrix confirms 100% validated requirement coverage: 24 of 24 documented requirements are mapped to executed test coverage.

Coverage Metric	Result
Total Requirements	24
Requirements Validated	24
Requirements Passed	23
Requirements Failed	1
Requirements Not Validated	0
Validated Requirement Coverage	100%

4. Defect Summary

Three confirmed defects were identified during TC-041. All three are traced to TS-023 and NFR-004 - Product Data Presentation Consistency. Each defect is currently documented as Medium severity, P3 priority, and New.

Defect ID	Product	Summary	Severity	Priority	Status
BUG-001	Test.allTheThings() T-Shirt (Red)	Product image/information mismatch	Medium	P3	New
BUG-002	Sauce Labs Bolt T-Shirt	Red bolt graphic missing from product image	Medium	P3	New

Defect ID	Product	Summary	Severity	Priority	Status
BUG-003	Sauce Labs Onesie	Product image does not match stated 3-snap closure	Medium	P3	New

5. Results by Functional Area

Functional Area	Executed	Pass	Fail
Authentication	6	6	0
Inventory	6	6	0
Product Details	2	2	0
Cart	9	9	0
Checkout	8	8	0
Order Completion	3	3	0
Navigation	3	3	0
Session	2	2	0
Usability & UI	2	1	1
End-to-End	1	1	0

6. Key Findings

- Core authentication, inventory, cart, checkout, order completion, navigation, session, and end-to-end purchase flows passed the planned manual test coverage.
- TC-041 failed because three product images did not fully align with the corresponding product information or descriptions.
- No test cases were blocked and no planned test cases remained unexecuted.
- Browser compatibility coverage was validated using the project's documented primary supported browser configuration, Google Chrome, through the executed end-to-end baseline.

7. Test Completion Assessment

The planned manual QA execution is complete. The portfolio demonstrates end-to-end traceability from requirements to scenarios, detailed test cases, execution results, and defect records. The three open defects are limited to product data presentation consistency and do not change the recorded pass results for the successfully executed core functional flows.

8. Final Outcome

Testing concluded with 42 of 42 test cases executed, a 97.6% pass rate, 100% validated requirement coverage, and three confirmed Medium-severity defects. The final artifacts provide a complete manual QA testing record for the SauceDemo portfolio project.
